### **Abstract**

By oxidation of (Z)-4,7-dihydro-1,3-dithiepinines with meta-chloroperbenzoic acid the corresponding 4,7-dihydro-1 $\lambda$ 4,3-dithiepine 1-oxides were synthesized in ~85% yield. A complete assignment of signals in the  $^1\text{H}$  and  $^{13}\text{C}$  NMR spectra of the compounds obtained was established. According to XRD analysis the seven-membered heterocycles crystallized in conformations chair or boat. The calculations by DFT method in the B3LYP/6-31G(d,p) version showed the possibility of conformational equilibrium of these forms in the gas phase. © 2010 Pleiades Publishing, Ltd.
